

THE CONNECTED VEHICLE

MAXIMIZE YOUR SAFETY AND EFFICIENCY ON THE GO

VOICE, VIDEO AND SOFTWARE ENGINEERED TO CONNECT YOUR VEHICLE LIKE NEVER BEFORE

ON THE ROAD AND IN CONTROL. WHEN EMERGENCY RESPONDERS ARE ON PATROL, SITUATIONAL AWARENESS - BOLSTERED BY KNOWLEDGE, COLLABORATION AND EFFICIENCY - IS IMPERATIVE.

Bringing the functionality and connectivity of the control room to your vehicle, the intuitive interfaces in our video systems, digital evidence management solutions and hands-free two-way radios provide personnel with comprehensive awareness - fundamental to their safety, productivity and response. Powered by cutting-edge technology, the in-car system observes and analyses surroundings - issuing immediate threat alerts - automatically captures evidence-grade footage - from inside the vehicle and its immediate vicinity - and allows reports and statements to be processed, shared and saved anywhere, at any time.

**THE TECHNOLOGY
POWERING THE CONNECTED
VEHICLE WORKS WITH YOU
TO LIGHTEN YOUR LOAD
AND HEIGHTEN YOUR
SITUATIONAL AWARENESS**

CONNECTED WHEN EVERY SECOND COUNTS...

MOBILE APPLICATION

Our mobile policing applications enable frontline officers to manage operational tasks while on the road. Our purpose-built applications can integrate with existing back-end systems to help respond quickly and complete tasks fast. Not only that, new technology means that officer initiated facial recognition (OIFR) is available in the field, as well as displaying ANPR alerts as they're received.

BODY WORN CAMERA

The VB400 is the next generation of body-worn camera technology. It captures evidence and provides situational awareness with rugged quality build, high performance and streaming of video over WiFi.

IN-CAR VIDEO

A leap forward in real time awareness, the M500 in-car video system is not just observing, but also analysing and providing real-time alerts to threats and objects. Video streaming and uploading of evidence from the field is enabled over LTE.

CARPLAY

As a result of our proactive mission-critical partnerships, we have delivered a world first - a public safety mobile application that operates within Apple CarPlay. Based on our PSCore public safety mobile application, its single, intuitive interface enables frontline personnel to manage key operational workflows, hands-free, from within their vehicle.

PORTABLE RADIO

Built for the frontline, the MXP600 is a rugged, lightweight, fully capable TETRA portable - easy to carry and easy to use. Future-ready for MCX services over broadband, it boasts innovative audio technology and best-in-class coverage.

INTEGRATED IN-CAR PC

The In-Car PC is integrated into the Vehicle Touch screen, along with Blue Light Controls, therefore minimising additional equipment installation and saving space in the front of the vehicle. It also enables the running of PC Based applications like Avigilon ACC and VideoManager for situational awareness, incident management, evidence capture and optimisation of operational efficiency.

4G & WiFi ROUTER

A compact ruggedized 4G LTE networking platform that provides connectivity to in-vehicle and mobile applications that require secure, always-on connectivity.
